

Weather Station Model Practice

Write the information for each station model. For the pressure, remember to add the decimal point between the 2nd & 3rd digit, then put a 9 or 10 in front of it. The acceptable range of pressures is 960mb to 1040mb. The first is an example.

Temperature: 55°F

Dew Point: 37°F

Wind Direction: from the SW

Wind Speed: 15mph

Cloud Cover: 25% (or scattered)

Pressure: 1013.8mb

Current Weather: strong rain [more dots means more rain]

Draw a station model using the following information. Remember, to write the pressure, remove the decimal point & use only the last three digits. For example, 1012.5mb becomes 10125 then just 125.
